Multimedia Environmental Compliance Training

At D&B Engineers and Architects, P.C. (D&B), we know that training your facility personnel can be a time consuming and challenging goal. So why spend all that time trying to create a training program for your facility when D&B can deliver customized and professional training for you to meet your budget?

We offer clients comprehensive environmental compliance training applicable to many industry sectors required to comply with the extensive and often overwhelming reality of environmental regulation. To make our programs as user-friendly as possible, we develop customized training for your employees using facility-specific information, photographs, company policies, protocols, and standard operating procedures.

D&B can schedule year-round training at your facility to best meet your needs. Our courses are presented by environmental professionals with years of industry and regulatory agency experience. Throughout all our training programs, D&B will decipher 40 CFR and its state-specific analogues into plain, understandable English. Each program is customized, showing its applicability, significance, and impact on your operations.

Who needs to be trained? In essence, anyone whose job requires an understanding of environmental mandates imposed on industrial and commercial sites should be trained, including those recently hired who need a general, overall waste management introduction; those recently assigned with hazardous waste management responsibilities; and anyone looking for a review of the basics, such as on-site hazardous waste managers, environmental managers and engineers, senior operations executives, safety personnel, maintenance/engineering employees, and strategic business planners. Additionally, because everyone who works with hazardous materials or has the potential for exposure needs to be properly trained and refreshed, now is not too late to start.

D&B offers programs that meet the regulatory requirements for hazardous waste management as outlined in 40 CFR Part 262. Topics include:

- Introduction to Resource Conservation and Recovery Act (RCRA)
- Hazardous Waste Identification
- On-Site Waste Management Options
- Land Disposal Restrictions
- Hazardous Waste Air Emissions
- Emergency Preparedness and Contingency Plans
- Off-Site Shipment: Department of Transportation (DOT) and Environmental Protection Agency (EPA) Requirements
- Recordkeeping, Reporting, and Training
- New Rules and Agency Interpretations
- Universal Waste Management

Additional multimedia environmental compliance training programs provided by D&B cover the following regulations:

- Clean Air Act
- Clean Water Act
- Safe Drinking Water Act
- Comprehensive Environmental Response, Compensation, and Liability Act
- Resource Conservation and Recovery Act
- Emergency Planning and Community Right to Know Act
- Federal Insecticide, Fungicide, and Rodenticide Act
- Toxic Substances Control Act
- Oil Pollution Act
