Roadway Rehabilitation Design Services

SERVICES INCLUDE:

Surveying
Feasibility and Design Reports
Cost Estimates
Curbs, Sidewalks, Ramps
Parking Fields
Drawings and Specifications
Construction Services

D&B Engineers and Architects, P.C. (D&B) offers clients with a dedicated Civil Engineering group comprised of trained professionals with extensive experience in the design of roads for villages, towns, and counties, as well as related work such as sidewalks, curbs, handicap ramps, driveway aprons, and parking fields. D&B's projects typically include horizontal and vertical alignment with full depth roadway restoration, asphalt pavement overlays, and curb and gutter repurposing or replacement.

Engineering services provided for planimetric and topographic surveying include the field work to locate physical features, underground and overhead utilities, and the elevations necessary to develop the drawings and specifications for the improvements. Coordination with all utility companies within the project area is essential to allow for accurate markouts and relocation of utilities, if necessary, prior to final paving.

D&B provides drawings using Computer Aided Design (CAD) drafting techniques to accurately portray the existing conditions and the new work to be performed. Drawings typically show profiles and cross sections at intervals of 50 feet or less to determine final grades for proper road drainage and to prevent ponding at intersections or along the roadway following a rain event.

Storm drainage improvements are an integral part of road improvement projects. D&B's personnel provides for new drainage or modifications to existing drain inlets, manhole structures and piping. Other utilities may also require modifications and relocation of existing sanitary sewers, water mains, or street lighting.

Replacement, additions, and maintenance of curbs, gutters, sidewalks, and handicap ramps are often provided for by "requirements contracts", wherein the type of work and timing is selected on an as-needed basis. D&B is experienced in the preparation and administration of these programs for numerous municipalities.

D&B will prepare the necessary documents for soliciting bids for construction, provide accurate construction cost estimates, and assist the municipality during the bidding process. D&B personnel will also tabulate the bids received, investigate the low bidder's experience and qualifications, and provide a recommendation for the award of the construction contract.

D&B will provide qualified full-time resident engineers during the construction phase, as well as quality control Inspectors who are intimately knowledgeable and thoroughly trained in all aspects of management and inspection of road projects.
